CHIBAL ABT are suitable for separation of a wide range of compounds

| Excellent peak shape

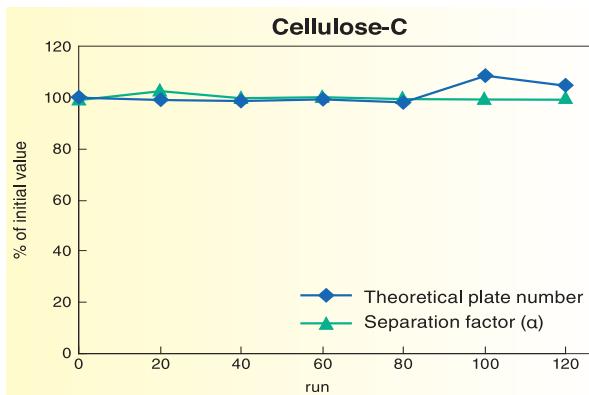

CHIRAL ART provide good peak shapes on ionic and metal coordination compounds.

Low column bleeding

CHIRAL ART immobilized type show remarkably reduced background signal under the typical gradient conditions. CHIRAL ART immobilized type offer excellent robustness on gradient analysis and highly sensitive analysis on LC/MS due to the very low ion suppression as well as a stable baseline.

Extended packing durability

Sequential gradient test

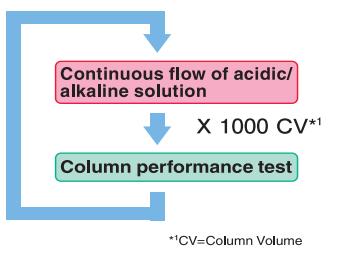

Column : 5 μm , 250 X 4.6 mmI.D.
Eluent : A) n-hexane, B) ethanol
Flow rate : 0-100% B (0-15 min)
Pressure : 3.0 mL/min
Temperature : 37°C

Column performance test

Column : 5 μm , 250 X 4.6 mmI.D.
Eluent : n-hexane/ethanol (90/10)
Flow rate : 1.0 mL/min
Temperature : 37°C
Detection : UV at 230 nm
Sample : trans-Stilbene oxide

CHIRAL ART have outstanding packed bed stability provided by using high-strength super wide pore silica and innovative packing technology. The column efficiency and selectivity are maintained even after the sequential gradient tests at a high flow rate (three times higher than normal flow rate) and under high pressure (rapid pressure change). CHIRAL ART are useful for shortening analysis time, (re-)equilibration time, or/and column cleaning time by increasing the flow rate. CHIRAL ART are also effective when using highly viscose solvents as a mobile phase on immobilized type columns.

Wide usable pH range (Immobilized type)

Continuous flow of acidic/alkaline solution

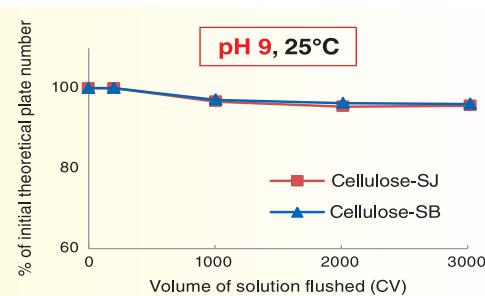

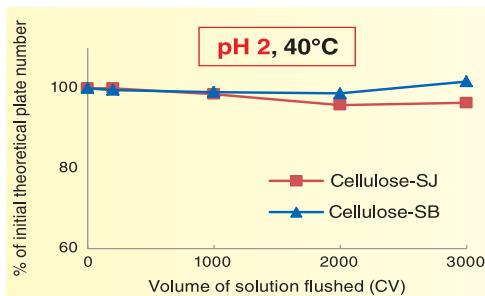

Column : 5 μm , 50 X 4.6 mmI.D.
Eluent : Buffer/methanol (90/10)
Flow rate : 1.0 mL/min

[Acidic condition]
Buffer : 0.1% H_3PO_4 (pH 2)
Temperature : 40°C

[Alkaline condition]
Buffer : 20 mM NH_4HCO_3 -DEA^{**} (pH 9)
Temperature : 25°C

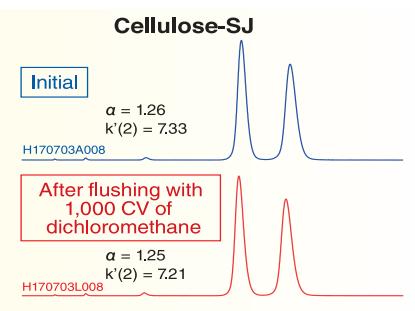

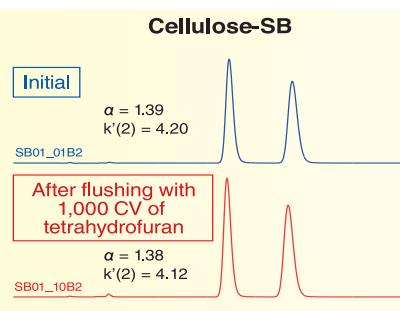

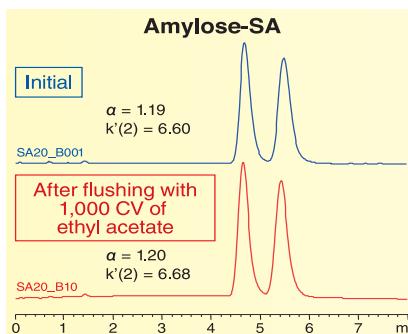

Column performance test

Column : 5 μm , 50 X 4.6 mmI.D.
Eluent : methanol/water (70/30) for Cellulose-SJ
acetonitrile/water (30/70) for Cellulose-SB
Flow rate : 1.0 mL/min
Temperature : 25°C
Detection : UV at 254 nm
Sample : 1-(1-Naphthyl)ethanol for Cellulose-SJ
Benzoin for Cellulose-SB

CHIRAL ART immobilized type have excellent chemical stability and can be used across a wide pH range. CHIRAL ART also enable the robust analysis of ionic compounds requiring pH control of mobile phase in reversed-phase conditions.

High solvent versatility (Immobilized type)

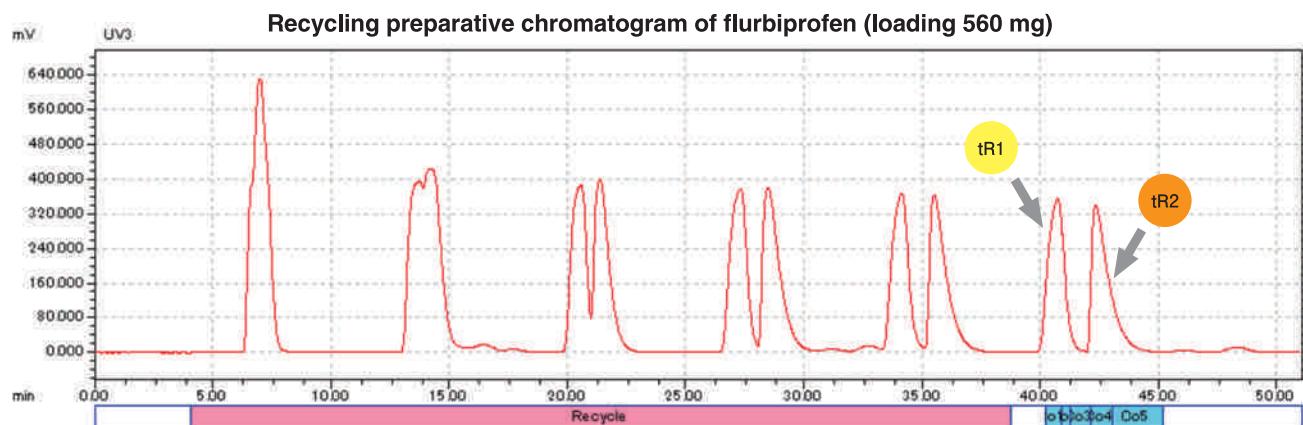

Retention rate of initial column performance (After flushing with 1,000 CV of each solvent at 40°C)

	Amylose-SA		Cellulose-SB		Cellulose-SJ	
	α	$k'(2)$	α	$k'(2)$	α	$k'(2)$
Ethyl acetate	100.3%	101.2%	100.0%	99.1%	99.3%	99.0%
Tetrahydrofuran	100.0%	100.0%	99.3%	98.0%	99.2%	99.7%
Dichloromethane	100.3%	100.6%	101.3%	99.6%	99.6%	98.4%

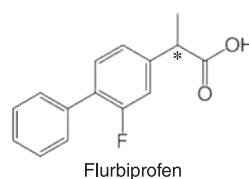

*CV=Column Volume

CHIRAL ART immobilized type have high solvent versatility. After flushing with various solvents, the losses of initial column performances were less than 2%.

High purity preparative purification of chiral compound using recycling HPLC

Column	: CHIRAL ART Cellulose-C 5 µm, 250 X 30 mm.I.D.
Eluent	: n-hexane/2-propanol/TFA (95/5/0.1)
Flow rate	: 45 mL/min
Detection	: UV at 280 nm
Injection	: 560 mg

	Single column		Recycling	
	tR1	tR2	tR1	tR2
Enantiomeric purity (%ee)	>99	>97	>99	99
Yield (%)	87	74	89	90
Productivity (mg product/hr)	122	103	335	336
Solvent consumption (L/g-product)	22	26	2.0	2.0

Productivity of single column preparation is estimated based on the stacking injection of the sample every 2.5 minutes

Productivity : about 3 times higher

Solvent consumption : about 1/10

Above is the result of preparative separation of chiral compound, flurbiprofen. Recycling preparation can achieve high purity and high yield on purification of the compound which is difficult to optimize preparative separation conditions using a single column method. Recycling preparation greatly contributes to reduction of solvent consumption and costs on purification as mobile phase is circulated during recycling mode.

YMC SUMI CHIRAL COLUMNS

SUMICHIRAL OA columns are high-performance chiral columns for enantiomer separation by HPLC. On SUMICHIRAL OA columns direct separation of various enantiomers can be realized effectively. Enantiomeric separation is achieved from the various diastereomeric interactions such as hydrogen bonding, charge transfer and host-guest interactions, etc. SUMICHIRAL OA columns are very useful for the accurate

determination of the optical purity and for the preparation of pure enantiomers of biologically active compounds such as pharmaceuticals, pesticides, and perfumes.

Special Merits of SUMICHIRAL OA

- The large number of theoretical plates of the columns offers high resolution.
- The packing materials have chemical stability and the columns have long life.
- The enantiomeric stationary phases give the inverse elution orders, resulting in accurate determination of the optical purity and efficient preparation of the enantiomer are.
